

FOR IMMEDIATE RELEASE

Theralase Laser Technologies Announces Q1 Financials

Toronto, Ontario – May 31, 2010 Theralase Technologies Inc. (TSX-V: TLT) announces its first quarter 2010 financials.

Revenue remained fairly constant year over year with total revenue for three months ending March 31, 2010 at \$462,081, compared to \$461,378 for the same period in 2009.

Selling expenses also remained fairly constant for the three months period ending March 31, 2010, represented as 24% of product sales compared with 25% for the same period the previous year. The small improvement is reflective of higher sales levels relative to reductions in selling expenses (travel, advertising and commissions).

A 32% increase in administrative expenses (\$350,980) represents increased expenditures on stock-based compensations and salaries (recent hires – production and accounting).

Roger Dumoulin-White, President and CEO of Theralase Technologies Inc. stated, “The net loss for the period ended March 31, 2010 was \$276,186, which included \$114,408 of non-cash expenses (amortization, stock-based compensation expense, foreign exchange gain/loss and lease inducements). The company expends the future product development costs of the TLC-2000 Biofeedback Therapeutic Laser and TLC-3000 Photo Dynamic Compound Technology from existing TLC-1000 Therapeutic Laser product sales, resulting in the overall net loss. The Company is poised for significant growth in the 2nd half of 2010 and 2011 as the Company expands its sales and marketing efforts in the US and Internationally and also prepares for the launch of its patented TLC-2000 Biofeedback Therapeutic Laser in 1Q2011.”

The complete consolidated financial statements and MD&A for three months ending March 31, 2010 can be found at www.theralase.com and www.sedar.com.

Theralase Technologies Inc. designs, develops and manufactures patented, super-pulsed laser technology used in bio-stimulation and bio-destruction applications. The technology is popularized for its efficacious treatment of chronic pain, inflammation, wound care and the ability to attack specifically targeted cancer, bacteria, and viruses when used in the presence of the Company’s patented Photodynamic Compounds.
