

THERAPEUTIC LASERS FOR PHYSIOTHERAPISTS

theraLASE[®]
Healing at the Speed of Light[®]

WHAT IS LLLT?

Theralase[®] low-level therapeutic lasers can benefit your patients, increase your revenue and are a great value-added service for chiropractors. Not only will this drug-free therapy add cash to your bottom line, but it will also complement the effects of your treatments. When applied correctly, it can help treat many of the conditions your patients suffer with.

Low-level laser therapy (LLLT), also referred to as photobiomodulation, has been actively used for nearly 50 years. To date, there are more than 4000 published studies worldwide involving low-level laser therapy with approximately 400 of those being double-blind studies.

Theralase[®] therapeutic lasers expose tissue to light energy (photons) of two different wavelengths, within the visible and near infrared spectrum, triggering a chain of different chemical reactions within the cell for tissue healing and pain reduction. Theralase[®] superpulsed laser technology can penetrate up to 5 inches in depth, stimulating even the deepest of conditions. It is a highly effective, non-invasive, and pain-free treatment alternative for a wide range of conditions.

Theralase[®] therapeutic lasers activate all three known cellular pathways.

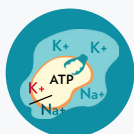

Accelerate Healing

660 nm Adenosine Triphosphate (ATP) Pathway

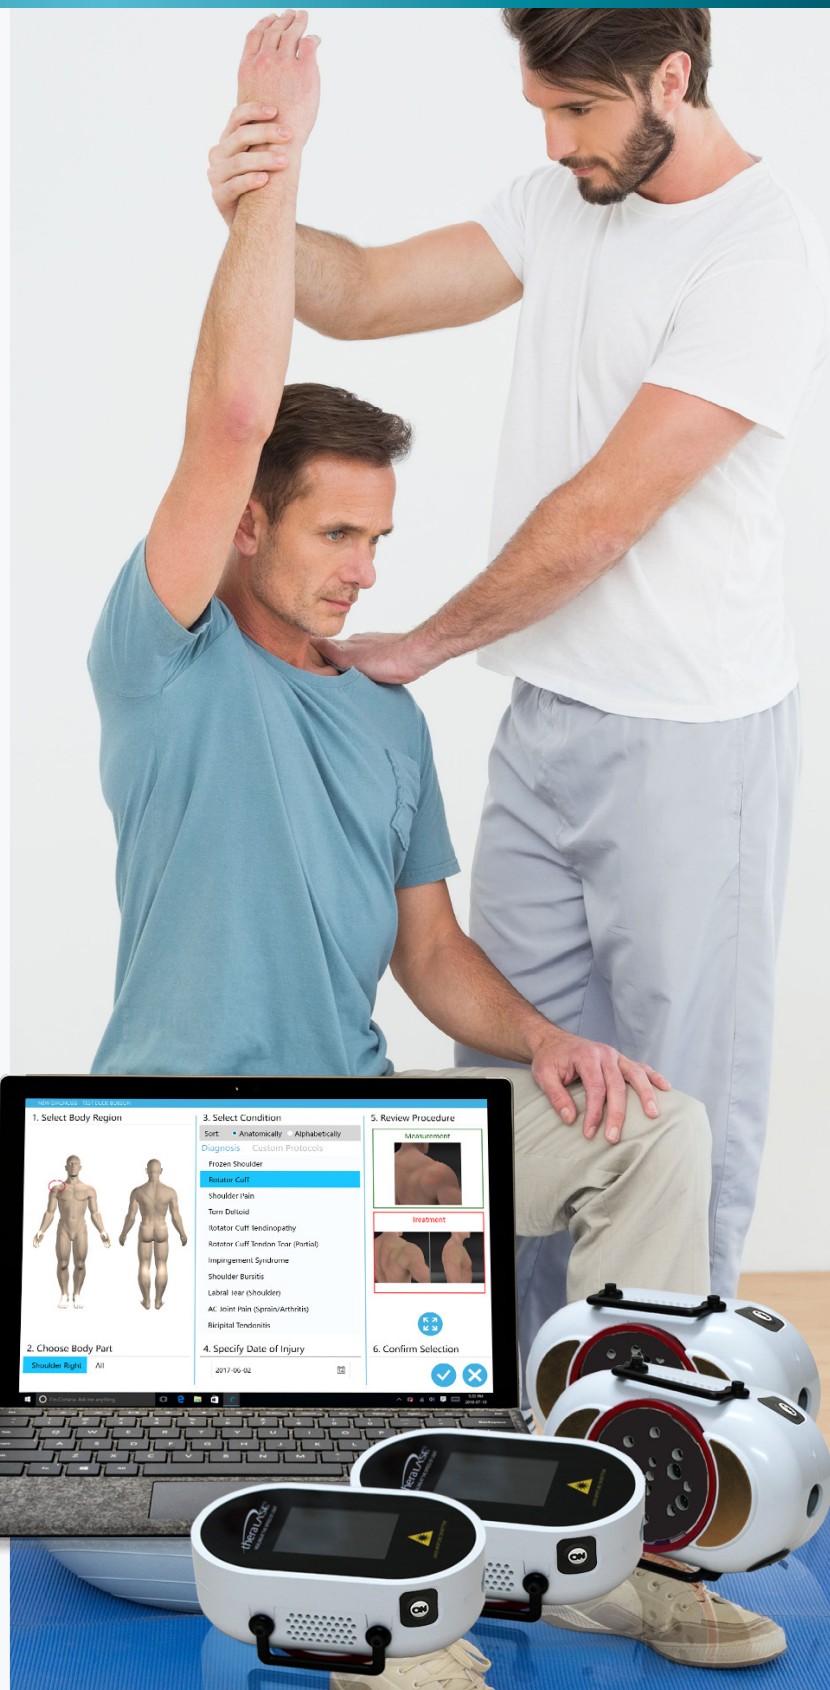

Reduce Inflammation

905 nm Nitric Oxide (NO) Pathway

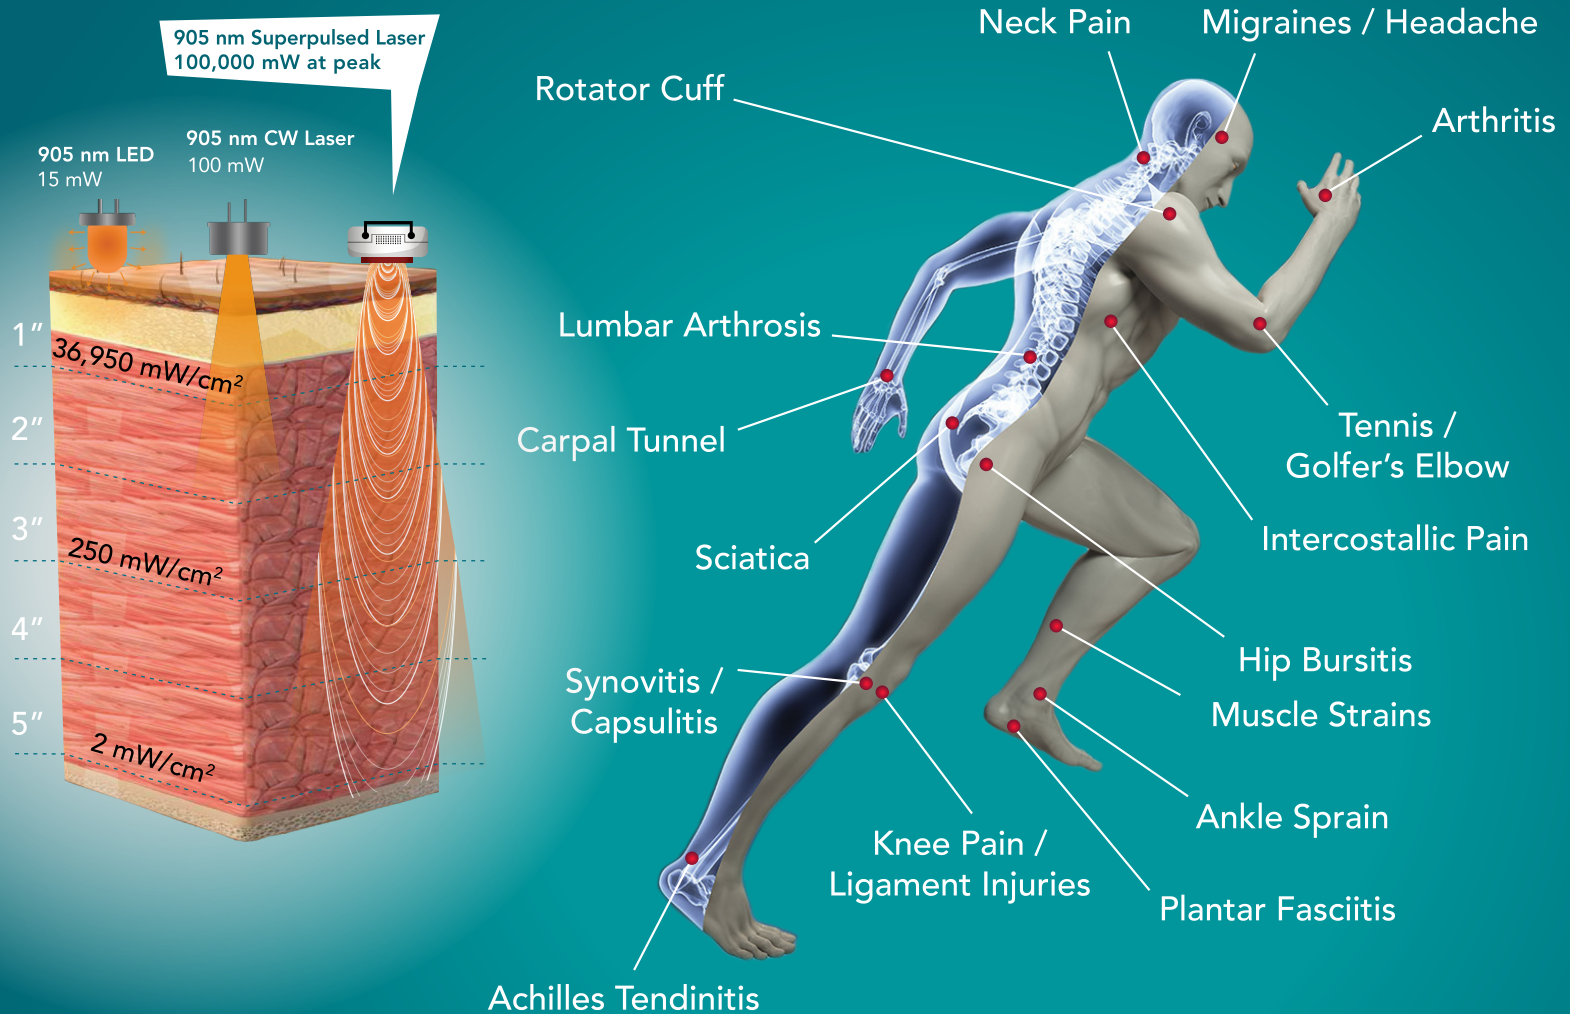

Eliminate Pain

905 nm Lipid Absorption Pathway

Our latest TLC-2000 laser system with biofeedback technology automatically adjusts its parameters to deliver the most effective dose of light energy to the exact location of tissue damage for every patient.

OVER 100 TREATABLE CONDITIONS

Theralase® lasers are manufactured to the highest standards and remain the most scientifically and clinically supported therapeutic medical laser technology on the market.
